Falcon Chemistry Guess 2023

Focused, Determined & Precise

For 1st Year Students

- 135 Most important MCQs
- 200 Most important short questions
- Most important long questions from each chapter

By: Prof. Muhammad Atif

Falcon Chemistry 135 Most Important MCQ

(Chapter # C	21					(M.P	ed by: Prof. Phil. Organic (Contact: 030 Lecturer
	The diameter of atom	ns are of	the order:					City Colle
	A 2 m	В	0.2 nm	C	0.2 m	D	0.2 um	
	1 a.m.u =			1				
	A 1.661x ⁻²⁷ kg		B 1.661x10 ⁻²⁴ g	g C	1.661x10 ⁻²¹ mg	D	All of these	
	Masses of atoms rang	ges from						
	A 10 ⁻²⁷ -10 ⁻²⁵ kg		B 10 ⁻²⁴ g-10 ⁻²² g	; C	10 ⁻²¹ mg-10 ⁻¹⁹ mg	D	All of these	
	Nickel has isotopes:							
	A 3		B 5	C	9	D	11	
	Total No. of naturall	y occurri	ng isotopes is:			Ç	-	
	A 240		B 40			D	154	
	27g of Al will react	complete	ly with how muc	ch mass o	f O ₂ to produce Al ₂	2O ₃		
	A 8 g		B 16 g	C	32 g	D	24 g	
	In combustion analys	sis H ₂ O v	apors are absort	oed by:				
	A Mg (ClO ₂) ₂		B Mg(ClO ₃) ₂	C	Mg(ClO ₄) ₂	I	50% KOH	
	The number of CO2	which co	ontain 8.0 g Oxyg	gen:				
	A 0.25	В	0.50	C	0.75	D	1.0	
	Largest number of m	olecules	are in:	1.00				
	A $3.6 \text{ g of H}_2\text{O}$	В	4.8 g of C ₂ H	5OH C	2.8 g of CO	D	5.8 g of N ₂ O ₅	
	Tin has isotopes:							
	A 7	В	9	C	11	D	5	
	How many isotopes	are prese	nt in Palladium?					
	A Four	В	10	C	Six	D	Seven	
	One mole of SO ₂ cor		1110		DIA		Бетеп	
			10.1 1023		1 600 1023			
	A 6.02 x 10 ²³ ato	oms B	18.1 x 10 ²³ molecules of	f SO ₂	of Sulphur	ms D	4 g atoms of S	O ₂
		1 1 F		1 502	or Sulphur	10		
	Volume occupied by						1	
	A 2.24 dm ³		B 22.4dm ³	C Value		D	112.0cm ³	
	Molecular Formula	i = n (en	ipiricai formula	a). Value	of n for Sugar is:		VS.	20
	A 0		B 1	(2	1	0.5	
	1 a.m.u =							
	A 1.661x10 ⁻²⁷ kg		B 1.661x10 ⁻²⁴ u	ıg	C 1.661x10 ⁻²¹ ng	Ι	All of these	
		***				Ass	1	
	Chapter # 0	2						
	The substance used	l for dec	olourization of	undesira	able color in a cry	stalline	substance	
	A H ₂ SO ₄	В	Silica gel	С	NaNO ₃	D A	nimal Charcoal	V.
		27		1134				
	Which substance d A KMnO ₄	oes not	Nephthalene	C C	NH ₄ Cl	D Io	dine	
	The most common		•	t ovtroot:		10		L.
	The most common							
	A Acetone	В	Ethanol	C	Rectified Spirit	D D	iethyl ether	
	Solvent extraction m		•	ul technic	que for separation v	when the	product to be sepa	arated is
	A Non-volatile	79757-3		В	Volatile or therma			
	C Non-volatile	or therma	ally stable	D	Volatile and therm	ally unst	able	

20.	Solvent extraction is an equilibrium process and it is controlled by:
	A Law of mass action B The amount of solvent used
	C Distribution Law D The amount of solute
21.	The chromatography in which stationary phase is a solid:
	A Gas liquid B Partition C Adsorption D Paper Chromatography Chromatography Chromatography
22.	The comparative rates at which solutes move in chromatography depends on:
	A The size of paper B R _f values of solutes C Temperature of the experiment D Size of chromatographic tank used
	C Temperature of the experiment D Size of elifornatographic tank used
	Chapter # 03
23.	One torr is equal to:
	A One Pascal B One mm of Hg C 76 cm of Hg D One atmosphere
24.	The absolute zero is:
	A Attainable B May be attainable C Unattainable D May not be attainable
25.	Normal human body temperature is?
25.	
	A 37 °C B 98.6 °C C 37 °F D 273 K
26.	Which has same number of molecules at STP?
	A 11.2 dm ³ of O ₂ and 32 g of O ₂ B 44 g of CO ₂ and 1 dm ³ of CO ₂
	A 11.2 dm³ of O ₂ and 32 g of O ₂ B 44 g of CO ₂ and 1 dm³ of CO ₂ C 28 g of N ₂ and 5.6 dm³ of O ₂ D 280 ml of CO ₂ and 280 cm³ of N ₂ O
27.	Partial pressure of O ₂ in lungs is:
	A 760 torr B 320 torr C 116 torr D 159 torr
28.	The exothermic process is:
	A Evaporation B Sublimation C Respiration D Boiling
29.	If absolute temperature of a gas is doubled and pressure is reduced to one half, the volume of the gas will
_0.	A Remains unchanged B Increases four times
	C Reduces to ¼ D Be doubled
30.	Which gas will diffuse more rapidly among the following?
	A N ₂ B H ₂ C NH ₃ D CO
31.	A N ₂ B H ₂ C NH ₃ D CO Smell of cooking gas during leakage from a gas cylinder is due to the property of gases?
٥١.	
	A Diffusion B Evaporation C Osmosis D All of these
32.	How should the conditions be changed to prevent the volume of a given gas from expanding when its mass is increased?
	A Temperature is lowered and pressure is increased.
	B Temperature is increased and pressure is lowered.
	C Temperature and pressure both are lowered.
	D Temperature and pressure both are increased.
33.	Gases deviate from ideal behavior at high pressure. Which of the following is correct for non-ideality?
	A At high pressure, the gas molecules move only in one direction.
	B At high pressure, the collisions between the gas molecules are increased manifolds.
	C At high pressure, the volume of the gas becomes insignificant.
	D At high pressure, the intermolecular attractions become significant.
34.	Plasma are found everywhere from the sun to
J 11	
25	A real gas obeying van der Waal's equation will resemble ideal gas if:
35.	A real gas obeying van der Waal's equation will resemble ideal gas if:
	A Both 'a' and 'b' are large B Both 'a' and 'b' are small
	C 'a' is small and 'b' is large D 'a' is large and 'b' is small
36.	Deviation of gas from ideal behavior is maximum at:
	A -10°C and 5 atm B -10°C and 2 atm C 400 °C and 2 atm D 0°C and 2 atm

Chapter # 04

37. Dipole-dipole interactions are present in:

A	Atoms of He gas	В	Molecules of CCl ₄	C	Molecules of solid iodine	D	Molecules of NH ₃
---	-----------------	---	-------------------------------	---	---------------------------	---	------------------------------

Forces which are present between ion and water molecules are:

A	Dipole-induced	В	Dipole-dipole	C	Ion-dipole	D	London dispersion
	dipole forces		forces		forces		forces

London dispersion forces are significant for:

A	Polar molecules	В	Ionic solids	C Metals	D	Non-polar molecules
20				Part of the second section of the second section of the second section	30	

NH₃ shows a maximum among the hydrides of VA group elements due to:

Α	Very small size of nitrogen	В	Lone pair of electrons present on nitrogen
C	Enhanced electronegative character of N	D	Pyramidal structure of NH ₃

The boiling point of glycerin at 1 atmospheric pressure is:

```
300 °C
210 °C
               В
                   270 °C
                                     290 °C
```

Boiling point of water and ethanol is:

A	Equal	В	Different	C	98 °C and 70°C	D	100 ° C and 90° C
---	-------	---	-----------	---	----------------	---	-------------------

Vapour pressure of a substance does not depend upon:

A	Temperature	В	Intermolecular forces
C	Surface Area	D	Physical state of substance

Amorphous solids:

A	Have sharp melting points	В	Undergo clean cleavage when cut with knife
C	Have perfect arrangement of atom	D	Can possess small portions of orderly arrangement

Glass may begin to crystallize by a process called: 45.

```
Super cooling
                    Sublimation
                В
                                         Crystallization
                                                              Annealing
```

Allotropy is the property of:

A Compound B Element	C	Atom	D	Mixture	
----------------------	---	------	---	---------	--

The branch of science which deals with structure of crystals is called:

				•			
Α	Anisotropy	В	Isomorphy	CCrystallography	D	Stoichiometry	

In orthorhombic crystal, the unit cell dimensions are: 48.

1 1		$\alpha = \beta = \gamma = 90^{\circ}$	В	$a \neq b \neq c$	$\alpha = \beta = \gamma = 90^{\circ}$
C	$a \neq b \neq c$	$\alpha = \beta \neq \gamma = 90^{\circ}$	D	$a \neq b \neq c$	$\alpha = \beta = \gamma \neq 90^{\circ}$

The example of hexagonal structure is:

95	8		8	Par 148			
A	Sulphur	В	NaCl	С	Graphite	D	Diamond

The no. of Cl ions per unit cell of NaCl:

	A 6	B 4	C 2	D 8	
51.	There are	Bravis lattices:			

A 7	7 B	10	C	14	D	17
-----	-----	----	---	----	---	----

The molecules of CO₂: 52.

A	Ionic crystals	В	Metallic Crystals	C	Covalent crystals	D	Any type of crystal	
---	----------------	---	-------------------	---	-------------------	---	---------------------	--

The number of carbon atoms in 22.0 g of CO2 are:

A	2 33	.33.	69 8)
A 3.01 x 10 ²³	B 6.02 x 10 ²³	C 3.01 x 10 ²²	D 6.02 x 10 ²²

Chapter # 05

In the ground state of an atom, the electron is present:

A	In the nucleus	В	In the second shell	C	Nearest to the nucleus	D	Farthest from the nucleus
---	----------------	---	---------------------	---	------------------------	---	---------------------------

NH₄Cl SO_2 C_2H_5 H_2O В D

VSEPR theory was proposed by? 73.

> Sidwick & Powell Nyholm and Gillespie Kossel Lewis В

Bond angle between two H-S-H bond is:

104.5° 107.5° 920 95° D

Which of the following is AB4 type molecule with two lone pairs? 75.

BeCl₂ CH_4 BF₄ H₂S В D

The hybridization in ammonia molecule is:

 sp^3 dsp² $B | sp^2$ D sp

96.	The ionic product of water	will increase if:				
	A H ⁺ ions are added		В	OH - ions are added		
	C Temperature is increa		D	H ⁺ and OH ⁻ ions are	addeo	l in equal amount
97.	The law of mass action wa	s given by:				
	A Vant's Hoff	B Bondeinstin	C	Guldberg and Waage	D	Berthelot
98.						of equilibrium constant Kc is:
99.	A 2 The term pH was introduce	B 1 ed by:	C	3	D	4
	A Henderson	B Sorenson	С	Goldsmith	D	Thomson
100		of an aquaous solution				
100.	The pH of 10 ⁻² moles dm ⁻³	•		1992	D	10
404	A 2	B 12	C	3	D	10
101.	Which relationship is corre	ect about the strength of	an ac	cid with the strength o	I its	conjugated base?
	$\begin{array}{c c} A & K_a \propto \underline{1} \\ & K_b \end{array}$	B $K_a \propto K_b$	С	$\overline{K}_a \propto \sqrt{b}$	D	None of these
102.	Sum of pK_a and pK_b is equ	al to:				
	A 14	B 7	C	0	D	1
103.	Ionization of hydrogen sul	phide gas is suppressed	by:		7	
	A KCl	B NaCl	C	HCl	D	NH ₄ Cl
104.	The K _{sp} value for PbSO ₄ is	1.8 x 10 ⁻⁸ . The maximu	um co	ncentration of Pb ⁺² io	ns is	:
	A 1.8 x 10 ⁻⁸	B 1 x 10 ⁻⁸	C	1.34 x 10 ⁻⁴	D	1.69 x 10 ⁻⁸
105.	When a small amount of a	cid or a base is added to	a bu	ffer solution, its pH va	alue	will change:
	A Drastically	B A little	С	Rapidly	D	Not at all
106.	If NaOH is added to a solu	tion of CH₃COOH, then	n		,	8
	A pH of solution decre	eases	В	H ⁺ ions concentrati	on d	ecreases
	C CH ₃ COO - ions con	centration increases	D	OH - ions concentra	ation	increases
107.	POH of a solution is 4. The	e [H ⁺] ion concentration	of th	e solution is:		
	A 10 ⁻¹⁰ mol dm ⁻³	B 4 mol dm ⁻³	C	0.4 mol dm ⁻³	D	4 x10 ⁴ mol dm ⁻³
	Chapter # 09					
108.	Molarity of pure water is:					
	A 1	B 18	C	55.5 D		5
109.	A solution of glucose is	10 %. The volume in	whic	h 1g mole of it is di	ssol	ved will be:
	A 1 dm ³	B 1.8 dm ³	C	200 cm ³	1	900 cm ³
110.	The consulate temperatu	re of water-aniline sy	stem	is:		
	A 69.5 °C	B 64.5 °C	C	167 °C D		49.1 °C
111.	If 2.0 g of NaCl is dissol	ved in 20 g of water,	the p	ercentage by weight	of l	NaCl:
	A 0.99 %	B 10 %	С	9.09 % D		0.90%
112	Which one is not equation				1	
	A $\Delta p = p^{o}x$	B $\Delta p/p^o = x_2$	С	PV = nRT D		$p = p^{o}x_{1}$
112		1 1				r r1
113.	Which of the following par				Î	Water 1 N'
	A Water and phenol	B Water and aniline	C	Water and benzene D		Water and Nicotine

130. If 75 % of any given amount of radioactive element disintegrates in 60 minutes, the half-life of radioactive is:

352	20 00	8 8	3	Š. :		5 B	100
A	20 minutes	В	30 minutes	C	45 minutes	D	25 inutes

131. NO catalyzes the oxidation of Sulphur dioxide to Sulphur trioxide. This is an example of:

	A	Homogeneous Catalysis	В	Heterogeneous Catalysis	С	Neutralization Reaction	D	None of these	
132. T	The c	atalyst used for the re	actio	n, HCOOH —	-	$H_2 + CO_2$ is			

		83					
A Cop	per B	Alumina	C Silica	D	Iron		

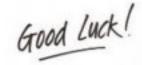

133. The energy of activated complex is:

Α	Greater than reactants and products	В	Less than the reactants and products
C	Equal to the products	D	Equal to the reactants

"Well done is better, than well said ... "

Compiled by: Prof. M. Atif (M.Phil. Organic Chemistry) Contact: 0300 2049808 Lecturer Chemistry City College Multan

200 Most Important MCQ Short Questions & LQs

(BASIC CONCEPTS)

Short Questions.

- What are isotopes? Why they have same chemical but different physical properties?
- What is Avogadro's number? Give equation to relate the Avogadro's number and mass of an element. 2.
- How N₂ and CO have same number of electrons, protons and neutrons? 8.
- Mg atom is twice heavier than that of carbon atom, comment 4.
- No individual atom of neon in the sample has a mass of 20.18 a.m.u. Give reason. 5.
- 6. Atomic masses are in fractions. Justify.
- Write down limitations of a chemical reaction. 7.
- 8. What are monoisotopic elements? Give name and symbol of such an element.
- Define isotopes. Why they have same chemical properties but different physical properties? 9.
- 10. Define mass spectrum. Which type of information we can get from it?
- 11. Define limiting reactant. Amount of product is controlled by limiting reactant. Why?
- 12. How limiting reactant is identified? Discuss Steps to determine Limiting Reactant.
- 18. Law of conservation of mass has to be obeyed during stoichiometric calculations. Justify it.
- 14. Write down assumptions of stoichiometry.
- 15. Many chemical reactions take place in our surrounding involves limiting reactants justify.
- 16. Actual yield is usually less than the theoretical yield. Give reasons. OR Why theoretical yield is greater than actual yield?
- 17. How the efficiency of a chemical reaction is determined? OR Why we calculate percentage yield?
- **18.** How many molecules of water are there is 10g of ice?
- 19. Why 23 g of Na and 238 g of uranium have equal number of atoms in them?
- **20.** One mole of H₂SO₄ should completely react with two moles of NaOH. How does Avogadro's Number help us too explain it?

Long Questions.

 What is an Mass Spectrometer. How it is used to determine the percentage abundance and atomic masses of elements.

2. Define combustion analysis. How percentage composition of each element in an organic compound is determined? (A)

 Define stoichiometry. Give its assumptions. Mentions two laws which help us to perform stoichiometric calculations. (B)

4. Define yield. Give its types. Explain why actual yield is lesser than theoretical yield? (A)

Define limiting reactant. Explain with two examples.

Write down four steps to determine empirical formula of a compound. (B)

CH# 02: (EXPERIMENTAL TECHNIQUES IN CHEM.)

Short Questions.

- 1. Mention only steps involved in complete quantitative determination.
- 2. What is difference between Gooch's crucible and Sintered glass crucible.
- **8.** Why there is a need to crystallize a crude product?
- 4. Write down the characteristics of the solvent selected for crystallization of a compound.
- 5. Define sublimation with two examples.
- 6. How does the rate of filtration increase by using fluted filter paper?
- 7. How are crystals decolorized?
- **8.** How are crystals dried?
- Define Ether Extraction.
- 10. Define Distribution law (or Partition law) and how it is helpful in solvent extraction?
- 11. What do you mean by solvent extraction? Which law controls it?
- 12. Differentiate between Stationary phase and mobile phase?
- 13. Define Chromatography? Discuss its uses.
- 14. What is Retardation Factor (R_f)? why it has no units?
- 15. Differentiate between Adsorption and Partition chromatography with examples.

Long Questions.

Note: No long Question included from this chapter according to the scheme 2023

CH# 03: (GASES)

Short Questions.

- Define atmospheric pressure. Give its two units.
- 2. What is Quantitative definition of Charles's Law? OR Throw some light on factor 1/273 in Charles's Law.
- 3. State Avogadro's law of gases. Give two examples.
- 4. What do you mean by absolute zero temperature of gases? Give its value. OR What is absolute zero? What happens to the real gases while approaching it?
- 5. Justify that volume of gas becomes theoretically zero at -273 °C.
- **6.** Convert (i) 37°C into °F (ii) -40°C to °F.
- 7. Derive expression of density of gas with the help of general gas equation. OR Prove that d=PM/RT.
- 8. Calculate the value of 'R' gas constant in SI units.
- 9. Derive the value of 'R' when the pressure is measured in atmosphere and volume in dm³.
- 10. State Dalton's law of partial pressur? Give its mathematical form.
- 11. Give two application of Dalton's law of partial pressure. OR Apply Dalton's law of partial pressure to determine the Partial pressure of a dry gas?
- 12. Why deep sea divers take oxygen mixed with an inert gas like He? OR Regular air cannot be used in diver's tank. Give reason.

Why Pilots feel uncomfortable at high altitude?

- 13. Differentiate between diffusion and effusion.
- 14. SO₂ is comparatively non-ideal at 273K but behave ideally at 327°C. Give reason.
- 15. Hydrogen and Helium are ideal at room temperature, but SO₂ and Cl₂ are non-Ideal.

- 16. Water vapors do not behave ideally at 273K. Why?
- 17. Define Joule-Thomson effect.
- 18. Define Critical temperature and Pressure. Give one example of each.
- 19. Derive Charles's law from kinetic molecular theory of gases.
- 20. Why gases show non-Ideal behavior at low temperature and high pressure?
- 21. What is plasma? Write down any two applications (Uses) of plasma.
- 22. Write down two characteristics of plasma. OR Why Plasma is Neutral?
- 23. Differentiate between Natural and Artificial plasma.

Long Questions:

- 1. A gas having volume of 10dm³ is enclosed in a vessel at 0°C and the pressure is 2.5 atm. This gas is allowed to expand until the new pressure is 2 atm. What will be the new volume of this gas, if temperature maintained at 273 K.
- 2. Calculate the mass of 1dm³ of NH₃ gas at 30 °C and 1000 mm Hg pressure, considering that NH₃ is behaving ideally.
- 3. 250 cm³ of a sample of hydrogen effuses four times as rapidly as 250 cm³ of an unknown gas. Calculate the molar mass of unknown gas.
- 4. Calculate the density of CH₄ (g) at 0°C and 1 atm pressure. What will happen to the density if (a) temperature is increased to 27°C, (b) the pressure is increased to 2 atm at 0°C.
- 5. There is a mixture of hydrogen, helium and methane occupying a vessel of volume 13 dm³ at 37°C and pressure 1atm. The masses of H₂ and He are 0.8 g and 0.12 g respectively. Calculate the partial pressure in torr of each gas in mixture.
- 6. Working at a vacuum line, a chemist isolated a gas in a weighing bulb with a volume of 255cm³, at a temperature of 25°C and under a pressure in the bulb of 10.0 torr. The gas weighed 12.1 mg. What is the molecular mass of this gas?
- 7. The relative densities of two gases A and B are 1:1.5. Find out the volume of B which will diffuse in the same time in which 150dm³ of A will diffuse?

CH# 04: (LIQUIDS & SOLIDS)

Short Questions.

- What are dipole-dipole forces? How they affect thermodynamic properties of substances?
- Lower alcohols are soluble in water, but hydrocarbons are insoluble. Why? OR 2. why ethyl alcohol is soluble in water?
- What are "dipole-induced dipole forces"? OR what are Debye forces? 3.
- Explain cleansing Action of detergents and soap on the basis of H-Bonding. 4.
- How does polarizability effect the strength of London forces? 5.
- 6. Why HF has a less acidic strength than HCl, HBr, HI?
- Why ice floats over the surface of water? OR Ice has less density than Liquid water. Why? 7.
- Water is a liquid at room temperature, while H₂S is a gas. Why? 8.
- Define vapor pressure. Explain the two factors which affect the vapor pressure of liquid. 9.
- 10. Earthenware vessels keep water cool. Justify.
- 11. One feel the sense of cooling under the fan after bath. Describe it.
- 12. Evaporation causes cooling. Give reason.
- 13. Why vacuum distillation can be used to avoid decomposition of a sensitive liquid?
- 14. Why are the vapor pressures of solids far less than those of liquids?
- 15. Why boiling point of H₂O is different at Murree hills and at Mount Everest?
- 16. Diamond is hard and electrically insulator. Give reason.
- 17. Cleavage of crystals is itself an anisotropic behavior. Why?
- 18. Define Isotropy and Anisotropy.

23. What are:

- 19. Why sodium chloride and cesium chloride have different structures?
- 20. Sodium is softer than copper, but both are very good electrical conductor. Why?
- 21. Ionic crystals are highly brittle. How?
- 22. Why electrical conductivity of metals decreases with increase in temperature. Why?
- 24. Write four properties of molecular solids.
- 25. Distinguish between isomorphism and polymorphism.
- 26. How liquid crystals act as temperature sensors?

(i) Symmetry

- 27. Freshly cut metals show the property of metallic luster. Justify.
- 28. Define transition temperature. Give two examples.

(ii) Habit of crystal

Long Questions:

- Define vapour pressure. How vapour pressure of a liquid is determined by manometric method? (A)
- Define liquid crystal. Give its types. Give their use in daily life.

 (A)
- What are molecular solids? Give examples and explain their properties.
- Explain electron pool theory of gases. Also give three properties of metallic solids.

 (A)
- Define hydrogen bonding. Explain hydrogen bonding in biological molecules.
- Discuss the factors affecting London dispersion forces.

 (B)

CH# 05: (ATOMIC STRUCTURES)

Short Questions.

- Give two defects of Rutherford Model.
- 2. Differentiate between slow and fast neutrons with examples.
- **3.** Why it is necessary to decrease the pressure in the discharge tube?
- Whichever gas in the discharge tube nature of cathode rays remains the same. Justify OR Why is e/m value of the cathode rays just equal to that of electron?
- **5.** e/m value of is same for cathode rays (electrons) but different for positive rays.
- **6.** Why positive rays are also called 'Canal rays'? How Positive rays are produced?
- 7. Calculate Mass of an electron when $m/e = 1.758 \times 10^{11} \text{C kg}^{-1}$
- **8.** Justify that cathode rays are material partials OR cathode rays have momentum.
- 9. Define Zeeman's effect and Stark effect.
- 10. How neutrons were discovered by Chadwick? Give the equation of nuclear reaction involved.
- 11. State the Heisenberg's Uncertainty Principle and give its mathematical form.
- 12. What is the difference between Orbit and Orbital? Draw the shape of P orbital.
- 18. What is the difference between continuous spectrum and line spectrum?
- Differentiate between Atomic Emission and atomic Absorption spectrum.
- **15.** What particles are formed by the decay of free neutron, give equation?
- **16.** Why the potential energy of revolving electron is with negative sign?
- **17.** How was the dual nature of an electron got verified?
- **18.** State Moseley's law. Give its importance.
- **19.** Derive de-Broglie equation.
- **20.** Draw the shapes of d-orbitals.
- 21. What is the difference between orbit and orbital?
- 22. Hund's rule and Pauli's exclusion principle.
- **23.** Describe (n+l) rule for the distribution of electron.

Long Questions.

1.	What are quantum numbers? Discuss Azimuthal and Magnetic quantum numbers.	(A)
2.	Give defects of Bohr's atomic model.	(A)
3.	Write down Millikan's oil drop method for the measurement of charge on electron.	(A)
4.	Derive an expression to calculate of radius of revolving electron in nth orbit by Bohr's model of atom.	(A)
5.	Write down main postulates of Bohr's atomic model.	(A)
6.	What are X-rays. Discuss its origin. Explain Moseley study.	(B)
7.	Write down four properties of cathode rays.	(B)

CH# 06: (CHEMICAL BONDING)

Short Questions.

- 1. What is octet rule? Why it is not universal?
- 2. Bond distance is the compromise distance between two atoms. Justify.
- Name the four factors affecting ionization energies.
- 4. Why second ionization energy is higher than first ionization energy?
- 5. Why is the size of anion greater than the size of parent atom?

- 6. Cationic radius is always smaller than the size of parent atom. Why?
- 7. Describe the variation of electron affinity along periods and groups in periodic table?
- 8. Ionization energy is an index to the metallic nature of element Justify.
- 9. Why sizes of the atoms cannot be measure preciously?
- 10. No bond in chemistry is 100% ionic. Justify it
- 11. Sigma bond is stronger than pi-bond. Why?
- 12. Draw the hybridization diagram of H₂O, CH₄, NH₃
- 13. Why lone pair occupies more space then bond pair of electrons.
- 14. What is the basic assumption of VSEPR theory?
- 15. Why are pi-bonds more diffused than sigma bonds? OR Differentiate between sigma and pi bond?
- 16. How nature of bond can be determined by electronegativity values?
- 17. Differentiate between Bonding and Antibonding molecular orbitals.
- 18. What is bond order? Give an example.
- 19. Why does Helium not exist in the form of He2?
- 20. Why is MOT superior to VBT?
- 21. How dipole moment is helpful to determine the molecular structure?
- 22. Define dipole moment and write the units of it.

Long Questions.

- Explain the bonding in O₂ or N₂ according to molecular orbital theory and explain its paramagnetic property. (A)
- 2. Give the postulates of VSEPR theory. Explain the structure of ammonia on the basis of this theory. (A)
- 8. Define dipole moment. Give its units. How is it used to determine the geometry of molecules? (A)
- 4. Define ionization energy. Give example. Discuss its trend in groups and periods. (A)
- 5. Describe sp² hybridization to explain the structure of ethene. (B)
- 6. Describe sp hybridization to explain the structure of ethyne. (B)
- 7. Define sp³ hybridization. Discuss the structure of water and methane on its basis. (B)

CH# 07: (THERMO-CHEMISTRY)

Short Questions.

- 2. What is thermochemical equation? Give two examples.
- 3. Differentiate between exothermic reaction and endothermic reaction.
- 4. Differentiate between spontaneous and non-spontaneous reactions with examples.
- 5. The burning if candle is a spontaneous process. Explain.
- 6. Define Enthalpy of Neutralization and Enthalpy of Combustion.
- 7. Define Enthalpy of Solution. Give examples.
- **8.** Define Enthalpy of atomization with an example.
- 9. Define Hess's law of constant heat summation with one example.
- 10. Define System, Surrounding and Boundary.
- 11. What is State Function? Give two examples.
- 12. Why is it necessary to mention the physical states of reactants and products in a thermochemical equation of a reaction?
- 13. What is difference between heat and temperature? Write a mathematical relationship between these two parameters?
- **14.** State first law of thermodynamics.
- 15. State Born Haber Cycle.
- **16.** Differentiate between internal energy and enthalpy.
- **17.** Prove that $\Delta E = qv$
- 18. Define heat and work.

Long Questions.

1.	What is Born Haber Cycle? How it used to calculate the Lattice energy of NaCl?	(A)
2.	How enthalpy of food is determined by bomb calorimeter?	(A)
8.	Explain glass calorimeter is used to determine the enthalpy of a reaction?	(A)
4.	State and explain with two example, the Hess's law of constant heat summation.	(A)
5.	State first law of thermodynamics. Prove that: $\Delta \mathbf{E} = \mathbf{q_v}$ and $\Delta \mathbf{H} = \mathbf{q_p}$	(A)
6.	Define the terms: system, surroundings, boundary, state function.	(B)
7.	Differentiate between spontaneous and non-spontaneous reactions.	(C)

CH# 08: (CHEMICAL EQUILIBRIUM)

Short Questions.

- 1. How do the Buffer Act?
- 2. Differentiate between Reversible and Irreversible reactions.
- 8. How values of Kc of a reaction helps to predict the direction of a reversible reaction?
- 4. How value of equilibrium constant (K_c) helps to predict extent of a reaction?
- 5. Define pKa and pKb.
- 6. Define Law of Mass Action and Equilibrium constant (Kc).
- 7. Calculate the pH of 10⁻⁴ mole dm⁻³ of Ba(OH)₂.
- 8. Calculate the pH of 10⁻⁴ mole dm⁻³ of HCl.
- 9. Define pH and pOH with mathematical expressions. What is the sum of pH and pOH at 25°C?
- 10. What is ionic product of water? Write its value at 25°C.
- 11. What is Common Ion Effect? How is NaCl purified by common ion effect? OR What is the effect of common ion on solubility?
- 12. What are buffer solutions? Why do we need buffers in daily life?
- 13. Write down Henderson's equation for acidic and basic buffer.
- 14. How does a catalyst affect the equilibrium position?
- 15. State Le-Chatelier's principle.
- 16. Give optimum conditions for synthesis of Ammonia gas by Haber's process.
- 17. Define buffer capacity. Write down Henderson's equation for acidic buffers.
- 18. Explain that a mixture of NH₄OH and NH₄Cl gives us the basic buffer.
- 19. What is the solubility product? Derive solubility product expression for Ag₂CrO₄.

Long Questions.

- 1. The solubility of PbF₂at 25 °C is 0.64 g dm⁻³. Calculate Ksp of PbF.
- Ca(OH)₂ is a sparingly soluble compound. Its solubility product is 6.5 x 10⁻⁶. Calculate the solubility of Ca(OH)₂.
- **3.** The solubility of CaF₂ in water at 25°C is found to be 2.05 x 10⁻⁴ moldm⁻³. What is the value of K_{sp} at this temperature?
- 4. What is the percentage ionization of acetic acid in a solution in which 0.1 moles of it has been dissolved per dm³ of the solution?
- 5. Calculate the pH of a buffer solution in which 0.11 molar CH₃COONa and 0.09 molar acetic acid solutions are present. K_a for CH₃COOH is 1.85 x 10⁻⁵.

CH# 09: (SOLUTIONS)

Short Questions.

- 1. What is parts per million? Write its mathematical expression.
- 2. Define molarity and molality and write its formula.
- **3.** How the molality is independent of temperature, but molarity depends upon temperature?
- 4. Define mole fraction. Justify that sum of mole fractions is always equal to unity.
- 5. Give three statements of Raoult's law.
- 6. Non-ideal solutions so not obey Raoult's Law. Give reason.
- 7. Differentiate between ideal and non-ideal solutions.
- **8.** Define conjugate solution with one example.
- **9.** What is fractional crystallization?
- 10. Why freezing points of solvents are depressed due to presence of solutes?
- 11. Define molal boiling point (Ebullioscopic) and molal freezing point (Cryoscopic) constant giving example.
- 12. Why NaCl and KNO3 are used to lower melting point of ice?
- **18.** Define colligative properties. Name them.
- 14. Write down conditions which should be fulfilled to observe colligative properties.
- 15. Differentiate between zeotropic and azeotropic mixtures.
- 16. Define solubility and solubility curves. Name the two types of solubility curves. OR What are Continuous and discontinuous solubility curves?

- 17. Define hydration energy of ions.
- **18.** Define water of crystallization with on example.
- 19. What are hydrates? How are they formed? Give two examples.

Long Questions.

2. Describe the Beckmann method to determine the freezing point depression. (A)

3. Explain the Landsberger method to calculate the elevation of boiling point. (A)

4. Explain the Raoult's law when both components in the solution and volatile. (A)

5. How lowering of vapour pressure as colligative property is used to calculate molar mass of solute. (A)

6. Discuss phenol water system and explain the term upper consulate temperature. (A)

(**B**)

7. Define hydration and hydrolysis with examples.

(ELECTRO-CHEMISTRY)

Short Questions.

- Define electrochemistry. 1.
- Define electrolytic cell. Give example. 2.
- Differentiate between Galvanic and Electrolytic cell. 8.
- Voltaic cell is a reversible cell. Justify it. 4.
- Define oxidation state with two examples. Rules for assigning Oxidation state 5.
- Calculate oxidation number of 6.

'S' in H₂SO₄, Cr₂(SO₄)₃, SO₄² and 'Mn' in KMnO₄ Na2MnO₄

- What is the difference between metallic and electrolytic conduction? 7.
- Differentiate between primary and secondary cells with examples. 8.
- A porous plate or salt bridge is not required in lead storage cell. Give reason. 9.
- Write down the difference between ionization and electrolysis.
- Impure copper can be purified by electrolytic process. Give reason. 11.
- 12. What is Anodized Aluminium? Give its advantages.
- **18.** What is Hall-Beroult process?
- **14.** What is function of salt bridge? How salt bridge maintains the electrical neutrality in the cell. OR
- Write down the reactions for the electrolysis of fused sodium chloride.
- Why Na and K can displace hydrogen from acids, but Pt, Pd, and Cu cannot? 16.
- How electrochemical series helps to predict the feasibility of a chemical reaction? 17.
- Define electrode potential and standard reduction potential.
- Describe the construction of SHE.
- Write chemical reactions taking place in NICAD cell.
- Write down the reaction at anode and cathode of silver oxide battery. 21.
- Write down chemical reactions taking place in alkaline battery. 22.
- Explain the electrolysis of fused PbCl₂.

Long Questions.

- Explain the construction and working of fuel cells. Give their advantages. (A)
- What is standard hydrogen electrode (SHE). How it is used to measure the electrode potential of zinc. (A) 2.
- Give two industrial applications of electrolysis./ How can you prepare sodium metal and caustic soda by electrolysis./ Describe the electrolysis of molten (fused) NaCl and aqueous solution of NaCl. (A)
- Explain charging and discharging of lead accumulator. 4.
- Define electrochemical series. Give its two applications. (C) 5.
- Explain construction and working of galvanic cell. Discuss why salt bridge is necessary in this cell. (C) 6.

(REACTION KINETICS)

Short Questions.

- 1. Differentiate between rate of chemical reaction and rate constant.
- Differentiate between instantaneous and average rate of reaction.
- Define Specific Rate Constant or Velocity Constant
- Rate of a reaction is an ever-changing parameter. Justify
- Define Zero and Pseudo 1st Order reactions with example.
- Photochemical reactions are usually zero order reactions. Justify.
- Define half-life period. How is it used to determine the order of reaction?

(B)

- 8. The radioactive decay is always a first order reaction. Explain.
- 9. Define order of reaction with an example.
- 10. Name the four methods to determine the order of reaction.
- 11. What is rate determining step? Give a suitable example.
- 12. How surface area affects the rate of reaction? Give one example.
- 13. Define energy of activation and activated complex.
- 14. What are reaction intermediates? Give one example.
- 15. Give two characteristics of enzyme catalysis.
- **16.** Define Autocatalysis with example.
- 17. Differentiate between homogeneous and heterogeneous catalysis. Give example.
- 18. Define catalytic poisoning and give an example. OR what is negative catalysis?
- 19. A finely divided catalyst may prove effective. Give reason.
- 20. A catalyst is specific in its action. Justify.

Long Questions.

7.

Give four characteristics of a catalyst.

(A)

Define enzyme catalysis. Give its four characteristics.

- (A)
- 8. How does Arrhenius equation help us to calculate energy of activation of a reaction?
- (A)
- What is order of reaction. Name five method to calculate order of a reaction. Explain two methods to find the order of a reaction.
 (A)
- **5.** Explain the effect of temperature on rate of reaction.

(B)

6. How light and surface area affects rate of a chemical reaction.

- (B) (C)

دور منزلوں کے مسافر تھکا نہیں کرتے لاکھ مشکلیں آئیں راہ میں مگر, روکا نہیں کرتے

'May all hard work before exam award the best, May you obtain highest Marks and your success be continued'

Discuss chemical method to determine the rate of a chemical reaction.

Regards:

Muhammad Atif

Keep Smiling Stay Blessed
